

## **3rd Party Analysis verifies commercial grade hydrogen production from ESTECH pilot plant**

**News release from ESTECH**

Svendborg, 19 Aug 2021

Danish Gas Technology Centre has made a 3rd party analysis of the produced hydrogen from the ESTECH CO<sub>2</sub> Pilot Plant after a longer period of daily operation.

We are pleased that the analysis verified a high caloric combustion value of the produced hydrogen, and a level of cleanliness sufficient for commercial usage and sales.

### **About ESTECH**

ESTECH A/S, which was established in late 2018, is an engineering and development company that further develops several high-tech and economically sustainable environmental technologies that have previously been placed in its sister company PureteQ A/S.

ESTECH has developed and patented a unique combination of Carbon Capture and parallel production of hydrogen. The technology is unique in its approach to Carbon Capture, as it merges two operations in one combined process. The ESTECH system provides cost-efficient capturing of CO<sub>2</sub>, and a maximum integration to Power-to-X between CO<sub>2</sub> capture and hydrogen production – solely based on green electrical power, with no thermal heat requirement.

ESTECH is a subsidiary of the PureteQ Group with its administration, design, development, testing centre and production based in Svendborg, Denmark.

We invite you to learn more about ESTECH by visiting our website at [www.estechn.dk](http://www.estechn.dk) and following us on LinkedIn:
